

FCC -

I am an XM Radio subscriber in the Washington, DC area, I have 4 subscriptions to XM radio (2 in my cars and 2 for computer and in-home use) the variety and digital quality of the signal are well worth the subscription price. Since becoming an XM subscriber, about 95% of my listening is from an XM channel, the other 5% is to WTOP (public radio) for local news.

Please reject the NAB's petition 04-160, since I am paying a subscription to XM for their selection and service and have decided not to listen to the corporate radio stations, I do not understand why they should have a say in what I can purchase.

It seems simple... if they're so concerned about XM and Sirius taking listeners, then maybe they should improve the quality of their programming to try attract/keep listeners. After all, competition and innovation is the key to a successful business.

Reject the NAB 04-160 petition!
